

Accessibility Evaluation (QA)

SI 539 WN 18 Final Project

Po-Jen Lai / boblai

Website: <https://events.umich.edu/>

1. *Run through each page with the WAVE Chrome Extension.*

No. There are a few errors in this website, such as missing from label, multiple form labels, empty link, and broken skip link.

2. *Users should be able to navigate through content using their keyboard.*

Yes, users are able to use tab to navigate through content.

3. *Users should be able to navigate content using a screen reader.*

Yes, users can use a screen reader to navigate content.

4. *The general architecture and hierarchy of the content should make sense.*

No, the general architecture and hierarchy are strange since there are no header and footer tag inside body. Besides, images are stored in several separate directories, which is not a good folder structure.

5. *Charts and images should all have alt-text so that users with screen readers or users on a slow connection will still be able to understand the images.*

Yes, charts and images all have alt-text.

6. *Decorative images should not be visible to screen readers.*

Yes, decorative images are invisible to screen reader.

Suggestion

- Use <header> and <footer> tag instead of <div> with class header and footer.
- Store all images in folders with same root folder named “images”.
- Remove some redundant links in the page.
- Tablet view could be better (header and footer do not change)
- Some style tags in html can be moved to css.
